

UNOPORE PVA NASAL DRESSING

UNOPORE

PVA NASAL DRESSING

PVA NASAL DRESSING

Made from highly advanced biocompatible synthetic PVA. It is produced by a chemical reaction that results in cross-linked polyvinyl alcohol with a completely open cell structure.

- High biocompatibility
- It is presented sterile and ready for use.
- Excellent pore range

HIGH QUALITY ADVANTAGES

The nasal cavity and paranasal sinus prevent postoperative epistaxis and provide hemostasis. The nasal tampon consists of a soft, absorbent and highly retaining Polyvinyl Alcohol (PVA) expandable sponge structure. When in contact with blood, the expanding sponge provides support and pressure to the bleeding area.

PROPERTIES

- It stops nose bleeding quickly and absorbs wound secretion effectively.
- Wet bandage does not cause second damage when removed.
- It has fast and high absorption capacity.
- It has high biocompatibility.
- It shows hemostatic properties.
- It has excellent pore spacing.
- It has the feature of being detected by X-Ray.
