

UNOSPLINT INTERNAL NASAL SPLINT

The Unosplint Internal Nasal Splint is indicated for nasal surgeries in general (Septoplasties, sinusectomies, rhinoplasties, tubinectomies, epistaxis surgeries and pituitary surgeries), and has to be positioned near the nasal septum.

UNOSPLINT

INTERNAL NASAL SPLINT
MEDICAL GRADE SILICON

LESS PAIN MORE COMFORT

INTERNAL NASAL SPLINT

The Unosplint Internal Nasal Splint is indicated for nasal surgeries in general (Septoplasties, sinusectomies, rhinoplasties, tubinectomies, epistaxis surgeries and pituitary surgeries), and has to be positioned near the nasal septum

- *100% medical grade silicone for ease of insertion and removal*
- *Provided sterile, ready to use*

High Quality Advantages

Made of silicone of medical grade, its flexibility and structural stability provide greater comfort, ensuring a less traumatic postoperative period and adequate healing of the septum, avoiding complications such as septal hematoma.

INDICATIONS

- SEPTOPLASTIES
- SINUSOTOMY
- RHINOPLASTIES
- TURBINECTOMIES
- EPISTAXE SURGERIES
- HYPOPHYSIC SURGERIES

Integral airway allows post-operative nasal breathing

It has a different diameter cannula that allows breathing through the nose and compresses the nasal sidewall, thus helping in the hemostasis of surgeries in the nasal turbinates, besides assisting in ventilation, avoiding synechiae ensuring a better sleep to the patient. Silicone provides a gentle withdrawal without adhesion to the tissue,
